

Factsheet,
October 2023

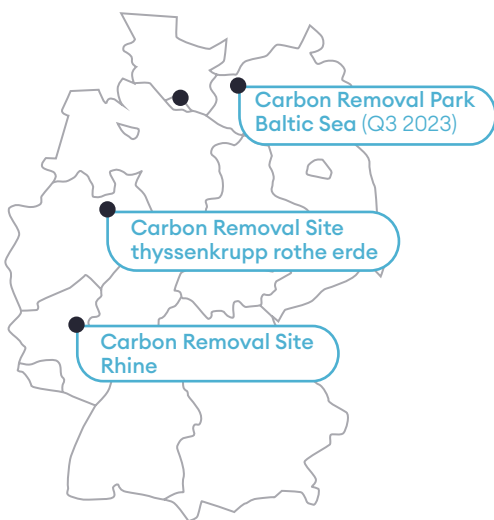

Company

Founded: 2017

Headquarters: Hamburg

Employees: 35

Production sites:

Management:

CEO
Caspar von Ziegner

CFO
Sven Wissebach

CCO
Venna von Lepel

Business model

Novocarbo is driving decarbonization and the expansion of renewable energy with a special product concept: we build and operate carbon removal parks that will enable us to remove up to 20,000 t of CO₂ from the atmosphere annually by 2025.

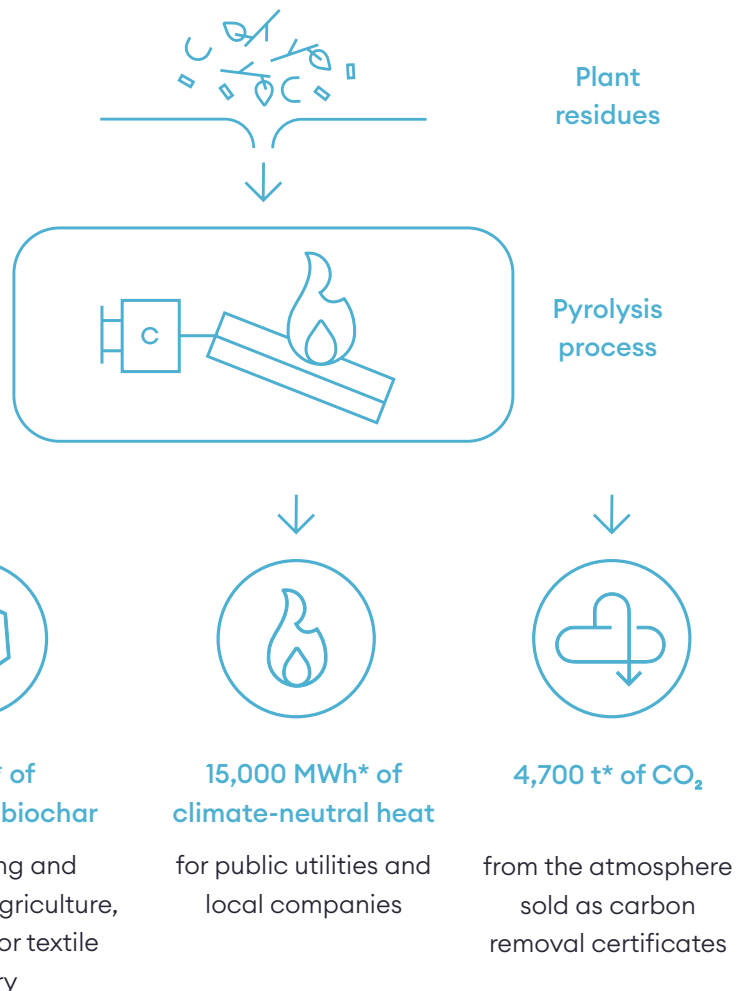

Our goal is to remove 1 million t of CO₂ from the atmosphere until 2030.

Technology & production

We use state-of-the-art **pyrolysis technology** to process plant residues into biochar. In the process, the carbon in the biomass is bound and permanently stored in the biochar.

The pyrolysis process also produces **regenerative, climate-neutral surplus energy**. We establish "heat-as-a-service" partnerships with local companies or municipal utilities with each new carbon removal park.

In addition, we trade **carbon removal certificates**. If the biochar is added to a permanent carbon sink (e.g., in soil or concrete), a certificate can be generated for the amount of carbon safely removed.
